Product Description

RNA Clean & Concentrator™-25 provides a simple and reliable method for the rapid preparation of up to 50 µg of high-quality RT-PCR-ready RNA. This simple procedure is based on the use of a unique single-buffer system and Clean-Spin™ column technology that allows for selective recovery of total RNA (> 17 nt), large RNAs (> 200 nt), and/or small RNAs (17-200 nt).

The procedure is easy: Add binding buffer and ethanol to your sample, then bind, wash and elute ultra pure RNA. The RNA can be eluted from the **Zymo-Spin™ IIC Column** in as little as ≥25 µl of RNase-free water. The highly-concentrated, purified RNA is suitable for all subsequent analyses and molecular manipulations.

The entire procedure typically takes about 5 minutes.

Concentration of diluted RNA samples.

RNA was eluted with 20 µl RNase-free water (n = 3, total input = 1 µg RNA).

Purification of small and large RNAs into separate fractions.

RNA Clean & Concentrator™ allows for purification of total RNA (> 17 nt), large RNAs (> 200 nt), and/or small RNAs (17-200 nt).

For **Assistance**, please contact Zymo Research Technical Support at 1-888-882-9682 or e-mail tech@zymoresearch.com.

Note:

For purification of DNA see the **DNA Clean & Concentrator™-5** and **-25** (Catalog Nos. D4013, D4014, D4033, D4034).

ZYMO RESEARCH CORP.

Make sure guidelines are followed to ensure the RNA isolation procedure is performed in an RNase-free environment.

Notes:

¹ Adjust the sample volume to 50 µl (minimum).

To process samples >800 µl, **Zymo-Spin™** columns may be reloaded.

² At this point, samples can be in-column DNase treated (page 4).

Buffer Preparation

Before starting, add 48 ml 100% ethanol (52 ml 95% ethanol) to the 12 ml **RNA Wash Buffer** concentrate (R1017) or 96 ml 100% ethanol (104 ml of 95% ethanol) to the 24 ml **RNA Wash Buffer** concentrate (R1018).

Protocol

All centrifugation steps should be performed at 10,000 – 16,000 x g. RNA species ≥17 nt will be recovered.

1. Add 2 volumes **RNA Binding Buffer** to each sample¹ and mix.
Example: Mix 100 µl buffer and 50 µl sample.
2. Add an equal volume of ethanol (95-100%) and mix.
Example: Add 150 µl ethanol.
3. Transfer the sample to the **Zymo-Spin™ IIC Column** in a **Collection Tube** and centrifuge for 30 seconds². Discard the flow-through.
4. Add 400 µl **RNA Prep Buffer** to the column and centrifuge for 30 seconds. Discard the flow-through.
5. Add 700 µl **RNA Wash Buffer** to the column and centrifuge for 30 seconds. Discard the flow-through.
6. Add 400 µl **RNA Wash Buffer** to the column and centrifuge for 2 minutes to ensure complete removal of the wash buffer. Transfer the column carefully into an RNase-free tube (not provided).
7. Add 50 µl **DNase/RNase-Free Water** directly to the column matrix and centrifuge for 30 seconds.

Alternatively, for highly concentrated RNA use ≥25 µl elution.

The eluted RNA can be used immediately or stored at -70°C.

DNase I treatment

The DNase digestion procedure can be performed using the **DNase I Set** (E1010)¹.

1. For each sample to be treated, prepare **DNase I reaction mix** in an RNase-free tube (not provided). Mix well by gentle inversion:

RNA sample (≤10 µg)	
volume adjusted with water or TE buffer	40 µl
DNase I	5 µl
DNA Digestion Buffer	<u>5 µl</u>
	50 µl

2. Incubate at room temperature (20-30°C) for 15 minutes. Then start with RNA purification (page 3, step 1).

In-Column DNase I treatment

All centrifugation steps should be performed at 10,000 – 16,000 x g.

1. Following the RNA binding step (page 3, step 3), prewash the column with 400 µl **RNA Wash Buffer**. Centrifuge for 30 seconds. Discard the flow through.
2. For each sample to be treated, prepare **DNase I reaction mix** in an RNase-free tube (not provided). Mix well by gentle inversion:

DNase I	5 µl
DNA Digestion Buffer	75 µl

3. Add 80 µl **DNase I reaction mix** directly to the column matrix. Incubate at room temperature (20-30°C) for 15 minutes. Then continue with RNA purification (page 3, step 4).

RNA purification from aqueous phase after TRIzol® extraction

1. Following Trizol®/chloroform or similar² extraction, carefully transfer the upper aqueous phase into an RNase-free tube (not provided).
2. For each volume of the aqueous phase (as measured or estimated), add 1 volume ethanol (95-100%) and mix.
3. Then continue with purification (page 3, step 3).

Notes:

¹ Prior to use, reconstitute the lyophilized **DNase I** as indicated on the vial. Store frozen aliquots.

Unit definition - one unit increases the absorbance of a high molecular weight DNA solution at a rate of 0.001 A₂₆₀ units/min/ml of reaction mixture at 25°C.

² Compatible with: TRIzol®, TRI Reagent®, RNAzol®, QIAzol®, TriPure™, TriSure™ and other acid-guanidinium-phenol reagents.

Purification of small and large RNAs into separate fractions

All centrifugation steps should be performed at 10,000 – 16,000 x g.
This protocol requires two columns (per prep).

1. Prepare adjusted **RNA Binding Buffer** (as needed). Mix an equal volume of buffer and ethanol (95-100%).
Example: Mix 50 µl buffer and 50 µl ethanol.
2. Add 2 volumes of the adjusted buffer to the sample and mix.
Example: Mix 100 µl adjusted buffer and 50 µl sample.
3. Transfer the mixture to the **Zymo-Spin™ Column** and centrifuge for 30 seconds.
